DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed 2/20/07 have been fully considered but they are not persuasive.

Applicant argues that Payton's teachings of predicting a score for an unviewed item via a collaborative filter, with the collaborative filter not providing equivalent functionality to claim 1, without an existing user rating, Payton cannot disclose the adjustment of an existing user rating. (Page 7)

The Examiner disagrees. The Profile in Payton requires all users to initially rate a common number of programs (column 9, lines 55-61). Further the user's profile itself is updated (figure 7b) with both the users ratings and 3rd party ratings. The ratings are not kept separate (figure 6), therefore a recommendation value for the user exists. Further the claim does not require an existing user score, which is input by the user.

Applicant argues that the use of third party recommendations is not equivalent to a user recommended score based on a third party score (pages 8-9).

The Examiner disagrees, the claims merely require that a user recommendation score for at least one of the items is adjusted based on said third party recommendation score. The claims are silent with regards to adjusting the score of the same item. As the combination, including Payton discloses both items explicitly rated by the user and others not explicitly rated, and the claims require at least one item (with Payton disclosing both), the combination of Gutta, Payton and Maissel teaches each and every element of the claims.

The Examiner notes that the claims as currently amended do not preclude a user selecting a recommender and the corresponding recommendations being automatically selected (functionality taught by Maissel).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1, 3-7, 9-10, 12-16, and 18-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Pat. Pub. 2002/0174429 to Gutta in view of U.S. Patent 5,790,935 to Payton and U.S. Patent 6,637,029 to Maissel.

Art Unit: 2623

Regarding Claim 1, Gutta et al disclose a method for generating recommendation scores, which obtains scores from various program recommenders and generates a 3rd party recommendation score in order to facilitate programming selection for a user. (Abstract; Par. [0016]).

Gutta fails to generate a user recommendation score for at least one of said available items that reflects a history of selecting said one or more items by said user and calculating an adjusted recommendation score for said user, wherein said user recommendation score is adjusted based on said third party recommendation score and receiving a selection of a least one third party recommender from the user and selecting at least one recommendation from that third party recommender.

Payton discloses a recommendation list 58 which is generated based upon ratings of programs (scores) that have been previously requested by a first user (column 5, lines 6-21, column 6, lines 26-40), a collaborative filter is utilized to calculate and adjusted recommendation score for a first user based upon a third party recommendation score by a user with similar interests, for items which have not yet been viewed by a user and these items are added to the lists of recommended items (figures 6-7b, column 8, line 50-column 9, line 61, the user's score for each unrated item is adjusted so that there is a score for each unrated item), thus expanding viewing selections for a first user to include items they might find interesting based upon viewers with similar interests.

Therefore, it would have been obvious to one skilled in the art at the time of invention to modify Gutta to utilize the first user scores, calculation of scores, and

Art Unit: 2623

expansion of recommended items as taught by Payton for the advantage of expanding viewing selections for a first user to include items they might find interesting based upon

viewers with similar interests.

The combination of Payton and Gutta fails to disclose receiving a selection of a least one third party recommender from the user and selecting at least one recommendation from that third party recommender.

Maissel further teaches a user can select whether he or she desires critic recommendations to be included. (Col. 12, Ln. 46-Col. 13, Ln. 9, by selecting the critic the corresponding recommendations are also selected), thus providing flexibility to the user by allowing the user to select the views of critics which match their tastes.

Therefore, it would have been obvious to one skilled in the art at the time of invention to modify the combination of Gutta and Payton to include the selection of third parties as taught by Maissel for the advantage of allowing users to select recommendations, which match their tastes.

Claims 10 and 19 correspond to Claim 1. Thus, each is analyzed and rejected as previously discussed.

Regarding claim 3, in order for the system of Gupta to generate a combined recommendation based upon other third party viewing histories, it must somehow "average" the viewing habits of said third parties.

Art Unit: 2623

Claim 12 corresponds to Claim 3. Thus, it is analyzed and rejected as previously discussed.

As to Claims 4 and 13, *Gutta* further teaches the use of a remote recommender. (citations of Claim 1).

Regarding claims 5 and 14, Payton is relied upon to teach that the third party recommendation includes an indication of whether said corresponding recommended item was selected by said third party (column 5, lines 6-45, column 6, lines 36-40). The user has to have used the item before recommending a score, thus indicating the item was selected.

As to Claims 6 and 15, *Gutta* further teaches the recommended items can be programs. (citations of Claim 1).

As to Claims 7 and 16, *Gutta* further teaches the recommended items can be "content" (i.e., programs can be broadly interpreted as "content"). (citations of Claim 6). Accordingly, *Gutta et al* anticipate each and every limitation of Claim 7.

Regarding claims 9 and 18, the combination of Gutta and Payton discloses a recommendation list, which incorporates the ratings of third users.

Maissel further teaches a user can select whether he or she desires critic recommendations to be included. (Col. 12, Ln. 46-Col. 13, Ln. 9), thus providing flexibility to the user by allowing the user to select the views of critics which match their tastes.

3. Claims 8 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Pat. Pub. 2002/0174429 to Gutta in view of U.S. Patent 5,790,935 to Payton and U.S. Patent 6,637,029 to Maissel in further view of U.S. Patent 5,754,939 to Herz.

Regarding claims 8 and 17, the combination of Gutta and Payton discloses a recommendation list, which rates a variety of programs.

The combination of Gutta, Payton and Maissel fails to disclose rating products.

Within the same field of endeavor, *Herz et al* disclose a similar system, which also provides products. (Col. 6, Ln. 34-Col. 7, Ln. 10), thus enabling a user to take advantage of learning more about various products and services and providing an additional revenue stream for programming providers.

Accordingly, it would have been obvious to one having ordinary skill in this art at the time of Applicant's invention to modify the combination of Gutta, Payton and Maissel with the shopping features of Herz in order to provide a system with more user interactive services in order to allow a user to learn more about various products and services and providing an additional revenue stream for programming providers.

Art Unit: 2623

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hunter B. Lonsberry whose telephone number is 571-272-7298. The examiner can normally be reached on Monday-Friday during normal business hours.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Miller can be reached on 571-272-7353. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
